

RGK6

54MM ALUMINIUM TWISTLOCK KARABINER RGK6

The large gate opening of the RGK6, make it ideal for use in industrial areas.

The use of this karabiner often negates the use of a sling as it can connect directly to steelwork/scaffolding. Often fitted to double lanyards for climbing masts and steel structures. This karabiner is fitted with a twistlock closure which locks automatically.

It also has the option of fitting a captive pin allowing permanent fixture to the lanyard.
