

RGH9 Two point elasticated leg

Accredited To: EN361

Web Material: Elasticated 45mm water repellent Nylon/
polyester elasticated leg straps.

Fittings: High tensile steel alloy & st/steel

Weight: 1.25kgs

Features: Rear & front attachment point, rip stitch indicators.
Elasticated leg & chest straps

With the introduction of **elasticated** webbing on the leg & lower chest straps, the RGH9 harness provides additional comfort and support during use. Based on the RGH2, this RGH9 is also fitted with a rear dee and a chest mounted front dee. This harness can be used similar to the RGH1 (see data sheet), but has the added feature of the front dee ring to extend the working capability of the harness. Utilizing the front dee, the harness can be fitted with a rope and grab system (RGA12) for vertical fall protection when an operative is making repeated ascents or similarly, when restraint/work-positioning is needed in either the vertical or horizontal plane.

A variety of other devices can be used with the front dee ring, but please check for suitability.

In addition to the **elasticated feature**, the harness is fully adjustable and fitted with rip stitch indicators. The ring connection between the chest & the shoulder straps, ensure no stress loading when force is applied to the front dee ring.

(For details of daily inspection procedures, see the info sheet)
