

Applications

Lifting and laying of cone-shaped concrete manholes.

CX model ensures contact on 2 points on the load.
SCX model is strengthened for intensive use and ensures contact on 3 points on the load.

Description

These accessories are fitted with polyurethane coated pads which enable the handling of cone-shaped manholes without marring. Delivery includes a chain sling (CX1 model).

Functioning

Use with a 2-legged sling:

- CX - 480 mm/ leg, chain Ø 7 mm
- SCX - 490 mm/ leg, chain Ø 7 mm fitted with HR 1 t shackles.

Slide the beam slantwise in the cone-shaped manhole, then fix horizontally. As the lift is applied, the polyurethane coated pads will engage and grip the inner wall diameter reduction, holding at about 700 mm. So as to free the beam, release the tension on the sling and take the beam out of the manhole, gripping it by its ends.

Particular instructions

- Do not use on cone-shaped manholes, whose smaller diameter exceeds 650 mm.
- Fit correctly the beam into the cone-shaped manhole before lifting.
- Always use the sling recommended by Topal Industries.
- Working temperature: -20° to +80°C.

technical sheet

CX/ SCX

lifting beams for cone-shaped concrete manholes

ref. : T 6011 GB
 rev. : 2
 date : Jun. 03
 page : 2/ 2

General characteristics

- Hot epoxy coating.
- Safety factor: 4 in accordance with the European Materials Handling Federation (1998 FEM 3^d edition) ; working group A5 and lifting speed 60 m/ mn.
