

RGL10 Special Mining Lanyard

Accredited To: En354 & EN355

Material: Alloy Steel to EN818-4

Fittings: 2 x RGK12 70mm Delta Link

Weight: 2.0kg

Max Arrest Force: <6KN

The RGL10 is fitted with the same shock absorber pack as all of the other RidgeGear fall arrest lanyards and is supplied in one standard length of: **1.8M**

The RGL 10 was originally designed for the mining industry, as the chain lanyard length provided protection against damage, due to falling debris. Although this is a heavy weight lanyard, once fitted, the user doesn't feel a marked difference to using other lanyards. Due to the weight of the chain, it tends to keep away from the user whilst working.
