**Weight:** 0.4 kgs

**Features:** Twin Leg Rope Restraint Lanyard

**Max Arrest Force:** **Restraint Only**

The RGL17 is supplied in 1m & 0.5m Lengths Other lengths on request

The RGL17 lanyard is an industry standard for twin leg rope restraint lanyards, and normally the minimum equipment issued with a harness for working at height. The 12mm nylon used in the manufacture provides **greater edge wear resistance** compared to other webbing and systems.

It is important to understand the principles of “fall restraint” as the RGL17 can only be used for **Fall Restraint**, as there is no shock absorbsion built into the system. If there is **any** possibility of an operative stepping / falling over an exposed edge, or falling through a fragile surface, a **Fall Arrest** product **must** be used.

This lanyard can be fitted with any compatible EN362 Karabiner
