

Dear Customer,

Following extensive testing of our webbing and manufacturing processes, we have increased the recommended lifespan of our products to 10 years across the entire RidgeGear harness and lanyard range. All products in this range are manufactured in the UK at our head office in Leek, Staffordshire and since April 2016 we have been proud members of the Made in Britain campaign.

- We tested samples of 10 year old products and found that they all still passed EN testing.
- We did additional UV tests that simulated long UV exposure on harness and lanyard webbing.
- **The results showed that the breaking loads on all of our webbing were between 85-98% of their original value, against the minimum requirement of 70%.**

The 10-year lifespan is effective on all textile based products and our rope (minimal use only) manufactured on or after January 2010 which is identifiable by the production date on the label.

If you have any questions on the above please do not hesitate to contact the customer services team on +44 (0)1538 384108, weekdays 08.00-17.00.

Yours sincerely,

RidgeGear Ltd
